It also attaches to cellular substrates as part of this function making it useful in visualising endothelial tissue. Mac-1 is a member of the Integrin Gene superfamily.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel isolated or recombinant modified integrin protein having extracellular domains of integrin alpha and beta subunits where one of the subunits has one or more mutations, an altered surface feature or an amino acid substitution or internal deletion, extracellular domains of the integrin beta subunit that comprise a mutation that alters a non-cysteine residue to cysteine or extracellular domains of integrin alpha and beta subunits. The polypeptide of the invention demonstrates antipsoriatic, thrombolytic, anticoagulant, osteopathic, cytosteatic, immunosuppressive, antiinflammatory, neuroprotective and antisickling activities and may be useful for immunocherapy in order to prevent or treat an integrin-mediated disorder such as an inflammatory disorder, an autoimmune disorder, thrombosis, cancer, osteoporosis, sickle cell anaemia, psoriasis and multiple sclerosis. The current sequence is that of the human integrin alpham such an unit precursor protein of the invention.
Novel modified integrin protein having extracellular domains of integrin alpha and beta subunits or integrin alphaII and beta3 subunit, useful for treating integrin mediated disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Integrin alpha subunit; beta; antipsoriatic; thrombolytic; anticoagulant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  osteopathic; cytostatic; immunosuppressive; antiinflammatory; neuroprotective; antisickling; immunotherapy; inflammatory; autoimmune disorder; thrombosls; cancer; osteoporosis; sickle cell anaemia; psoriasis; multiple sclerosis; human; precursor;
                                                                                                                                                                                                                                                                                                                                                                                                                 Human integrin alphaM subunit precursor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID NO 4; 232pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual, comprises detecting the expression level of the genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, e.g. nectanical organ replacement rejection, xenotransplant rejection or mechanical organ replacement rejection, in an individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a protein that is encoded by the mRNA of the invention.

The present invention describes a method (M1) for identifying an inhibitor of HIV entry into a human host cell. (M1) comprises identifying an inhibitor of a cell surface polypeptide selected from CXCR-4 (352.2 anino acids, SEQ ID NO:8, ADP44052), CCR4 (350 amino acids, SEQ ID NO:19, ADP44052), CCR7 (378 amino acids, SEQ ID NO:12, ADP44053), CDR4 (350 amino acids, SEQ ID NO:16, ADP44063), CDR4 (354 amino acids, SEQ ID NO:18, ADP44065), CDR9 (199 amino acids, SEQ ID NO:20, ADP44063), CDR9 (354 amino acids, SEQ ID NO:20, ADP44063), CDR3 (365 amino acids, SEQ ID NO:20, ADP44063), CDR3 (365 amino acids, SEQ ID NO:20, ADP44071), RARA (462 amino acids, SEQ ID NO:20, ADP44071), RARA (462 amino acids, SEQ ID NO:20, ADP44071), RARA (462 amino acids, SEQ ID NO:30, ADP44077), CCC (462 amino acids, SEQ ID NO:32, ADP44077), ADP44081), PAXI (150 amino acids, SEQ ID NO:30, ADP44077), CCC (462 amino acids, SEQ ID NO:32, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:32, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (1009 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (1009 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (1009 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:32, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP44081), CR PKCS (576 amino acids, SEQ ID NO:30, ADP4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          64
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention comprises marker genes for inflammatory bowel disease (IBI - FcgammaR IIIa, FcgammaR IIIb, Mig, NRG-2, hexokinase, HM74, REG III, LPAP, Mip-1(beta), L=selectin, EGFL6, IDO, IL-8, CD11c, and TLR2 genes. The DNA and protein sequences of the invention are useful in the detection and treatment of IBD (e.g. ulcerative colitis and Crohn's disease). The present amino acid sequence represents an IBD marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel marker gene of inflammatory bowel disease (IBD) comprising base sequence of e.g., Fc gamma R IIIa, Fc gamma R IIIb, Mig, NRG-2, hexokinase 3, HM74, CD11c, TLR2 gene, useful for screening therapeutic agent for IBD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5 VLLLTALTLCHGFNLDTENAMTFQENARGFGQSVVQLQGSRVVVGAPQEIVAANQRGSLY

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                127

sub-a beta Clone lambda X47 was isolated from a cDNA library constructed from:total RNA extracted from phorbol myristate acetate stimulated HL-60 myelomonocytic cells. The library was screened with oligonuclectide probes based on tryptic peptide fragments of p150.95. The sequence can be attached to appropriate control elements and expressed in prokaryotic and eukaryotic cells. The protein can be used to treat or prevent rhindviral infection because it interacts with ICAM-1 and inhibits cell-virus attachment. It can also be used as an anti-inflammatory agent. See also AAQ06063-4, AAQ06068, AAR07152-6. (Updated on 25-MAR-2003 to correct PR field.) Treatment of viral esp, rhino-viral infection - by admin. of alpha unit of p150.95 cell surface adhesion receptor, opt. together with chain of CD-18 family. Disclosure, Fig 3, 59pp, English

Use of novel anti-alpha integrin d monoclonal antibodies to inhibit macrophage infiltration and reduce inflammation at central nervous system injury

Example 5; Fig 1; 270pp; English

Integrins are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a beta subunit. One class of human integrins are restricted to expression in white blood cells and have a common beta2 subunit: the leukocyte integrins, Leu-CAMS, leukointegrins or beta2 integrins. Beta2 integrins have an important role in immune and inflammatory responses. The present protein sequence is the human integrin alpha subunit CD11c. This sequence was used in an alignment to identify a novel beta2 integrin alpha approximately 64 identity to the protein sequence of alpha\_d sproximately 64 identity to the protein sequence of alpha\_d. The approximately 64 identity to the protein sequence of alpha\_d. The approximately 64 identity to the protein sequence of alpha\_d. The accions a sproximately 64 identity to the protein sequence of alpha\_d. The class of a clerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome, rheumatoid arthritis and leukocyte adhesion deficiency (IAD). In addition, anti-alpha d monoclonal antibodies may be used in the system injury. The monoclonal antibodies can also be used to detect and clagnose Crohn's disease

Sequence 1163 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                    5953
